

REMARKS OF SENATOR DOLE

THE SEAGRAM FAMILY ASSOCIATION

Sunday, April 1, 1984--6:00 p.m.--Fort Lauderdale, Florida

Why worry about the deficit--What
does it mean to the average American?

- If nothing is done to reduce deficit spending over the next five years, the total Federal debt will nearly double to over \$10,000 for every man, woman and child in America.
- At this level, by 1989 it will take one-half of all Americans' personal income tax payments just to pay the Federal Government's interest bill.
- By 1989 the annual Federal interest cost will amount to \$250 billion--about \$1,100 for every American.
- That \$1,100 per person interest cost is equal to 40% of each person's annual expenditure for food.
- Virtually all economists agree that the sustained enormous deficits that we are facing will be economically harmful.
- Many Americans will find home-buying more difficult with higher deficits. Consider a family purchasing a home at today's current interest rate, averaging about 12-1/2%, with a \$55,000 mortgage. If the deficits push interest rates up, total interest costs over the 30 year term will be \$15,500 more for each one percentage point increase.
- All Americans will directly feel the results of high deficits if they lose jobs as a result of a business slowdown resulting from a crowding out of private investment, or if they lose jobs to imported products made more competitive because of an abnormally strong dollar or if they end up paying higher prices because inflation is rekindled.

What is the Federal deficit likely to be?

- The estimates of future Federal deficits are quite sensitive to one's economic assumptions. Yet even under the most optimistic of economic assumptions, the deficit will remain at historically high \$200 billion levels over the foreseeable future, unless drastic action is taken.
- Assuming an extremely strong recovery (4% real growth of GNP) is sustained over the next few years and all of the Administration's

proposed spending cuts and revenue proposals are enacted, the deficits are still projected to be:

<u>FY 1985</u>	<u>FY 1986</u>	<u>FY 1987</u>	<u>FY 1988</u>
\$180 billion	\$177 billion	\$180 billion	\$152 billion

- If economic growth is not so strong (3% real GNP growth) and interest rates are slightly higher (9% T-bill rate), and Administration's spending cuts are not enacted, the projected deficits would be:

<u>FY 1985</u>	<u>FY 1986</u>	<u>FY 1987</u>	<u>FY 1988</u>
\$202.6 billion	\$236.7 billion	\$270 billion	\$290.1 billion

- If we have an economic downturn during this period, we may be facing \$300 plus billion deficits.

Why should we act this year on the deficit

- If we fail to deal with the deficit now, the problem will become worse. Current projections showing deficits holding in the range of \$200 billion probably are optimistic, as they are based upon assumption of steady economic growth through 1989. However, postwar experience suggests that the average recovery lasts only 3 years, making a recession in 1985 or 1986 likely.
- If we postpone action until 1985 and we do suffer another recession, the deficits would then hit the \$300-\$400 billion range. At that point, it may be difficult to cut the deficit without further weakening the economy. Our choices would become very difficult indeed.
- Of course, failure to reduce the deficit in 1984 makes a recession likely to come sooner, as interest rates are forced up by private credit demands clashing with Treasury borrowing needs.
- By postponing action of the deficit, we increase the risk of recession. The average increase in the unemployment rate during a postwar recession is about three points, or three million jobs. By acting to reduce the deficit, we can significantly lower the risk that three million workers will lose their jobs in 1985 and 1986.

- The rise in interest rates will depress auto sales, housing starts, and capital goods orders. It is widely recognized that sustained economic recovery will be impossible unless these key sectors are healthy.
- Alternatively, the Fed could offset the deficits' impact on interest rates by "monetizing" the debt, leading to a resurgence of inflation in 1985. If we do nothing, we will force the Fed to choose between high interest rates and recession, or inflation.
- Failure to reduce the deficits in 1984 may also depress the stock market. A key factor in determining equity and bond prices is investors' confidence that Congress and the Administration can produce a sound fiscal policy. If we send the signal that the deficit problem is secondary to politics, equity and bond prices may fall.
- The exploding cost of servicing the Federal debt will make controlling spending more difficult each year, unless the deficits are reduced soon. Each year that we add \$200 billion in new Federal debt adds about \$15 billion to the next year's interest costs.
- The economy is now on a path where more and more of its resources go just to pay off the debt. According to economist Lawrence Summers, "It's a case where the miracle of compounding (interest) works against you."
- In 1976 net interest accounted for just 7% of total outlays But if we do nothing, by 1988 the total Federal debt will be more than half of total GNP, and the net interest cost of servicing this debt will reach 14% of all spending. Each year that we do nothing, the share of Federal spending that we can control gets smaller.
- Recent studies indicate that current and prospective budget deficits may have helped to overvalue the American dollar. If the deficits are not reduced, the problem of overvaluation could become worse, weakening the competitive position of American exports and costing the U.S. jobs in such industries as steel, electronics, and agriculture.

Deficit downpayment in 1984

- The President took the lead to begin a deficit-reduction effort in 1984 by calling for bipartisan negotiations on a package to reduce the deficit by \$100 billion over 3 years. Now he has worked with congressional Republicans to outline a \$150 billion package including defense savings (\$40 billion), nondefense cut

(\$43 billion), revenue increases (\$48 billion), and debt service savings (\$18 billion). As the President suggests, we can work with a variety of modest spending reductions, and tax reforms that raise revenue, to enact a significant deficit "downpayment" in 1984.

- Even though election-year politics makes it difficult to launch the kind of major assault on the deficit that we really need, that is no reason to do nothing. Making a noticeable dent in the deficit will make our job easier in the years ahead. Even more importantly, it will demonstrate that we can face up to the deficit problem even in an election year.
- The Finance Committee has agreed on spending and revenue options just within its jurisdiction that achieve about \$74 billion of the "downpayment" goal. To do that we are drawing on a number of proposals that have been on the table for some time, including some already in the legislative "pipeline":

-Items included in the FY 1984 reconciliation bill, S. 2062, which awaits Senate action

-Treasury-endorsed proposals on tax shelters and other abuses

-Administration -proposed spending cuts that were not followed through on last year

-Administrative savings and other proposals made by the Grace Commission

-Additional proposals considered in the Finance Committee last fall

- Target. With an overall goal of \$150 billion in savings, we can achieve \$21.4 billion from revenue changes pending in S. 2062, \$3.8 billion in spending reduction from Finance Committee programs in S. 2062, \$3.1 billion from Grace Commission recommendations, \$9.6 billion in debt service savings, and the remainder from additional spending and tax changes aimed at desirable policy reforms.
- Feasibility. The key is to keep following the President's suggestion and concentrate on relatively non-contentious items, avoiding things like the third-year tax cut and indexing, mean-tested entitlements, social security, and the like. Our effort must be bipartisan and balanced to do the job: Democrats and Republicans alike will benefit by cooperating to take swift action on the deficit. Time is of the essence if we are to make a beginning this year.

- Initial Finance Action. On February 23, the Finance Committee began action to reduce the deficit. So far the Committee has agreed to changes in health care programs that save \$8.3 billion between now and 1987, over and above the provisions in S. 2062. In addition, the Committee agreed to tax reform and modest revenue raisers that generate \$48.1 billion between now and 1987, provided at least that amount of spending reduction can be achieved. The House Ways and Means Committee has also reported a \$50 billion tax bill, so we may be on our way.

Recovery--What progress have we made

Strength of recovery

- A strong recovery is on track and appears to be moderating to a pace that can be sustained in the years ahead. As an indication, look at the expansion of real gross national product. It grew by 9.7% in the second quarter of 1983, 7.9% in the third quarter, and an estimated 4.5% in the fourth quarter. By this measure, the recovery is the strongest since 1961.
- Housing starts are running at a rate of about 2.2 million units a year, and jumped 11.2 % in February.
- Industrial output in 1983 rose 6.5%, and factory utilization is up to 80.7%--the highest level in two years, and close to the normal capacity of 82%.
- The Commerce Department's survey of business plans for 1984 show that business plans to increase capital investment by 16%--this is higher than that seen at comparable points in previous postwar recoveries.

Inflation

- The best news about this recovery is that it is noninflationary. In 1983 the producer price index rose just 0.6%--the lowest increase since 1964. The CPI for 1983 was 3.8%, the lowest since 1972. Continued moderation in producer prices indicates low inflation will continue.

Creating Jobs

- People are going back to work, and the pace of job creation has been unusually high for a postwar recovery. On January 6 the Labor Department announced the civilian unemployment rate dropped from 8.4% last November to 7.8% in February. Overall, this means unemployment has dropped 2.9 percentage points over the past year.

- The continued strength of the recovery shows that recent growth in employment has not just been a statistical fluke, but shows a real turnaround in the labor market. Unemployment fell 230,000 in December, and there have been 4.9 million jobs created in the last year.
- What is more, the growth in jobs is broad-based. While manufacturing industries showed the most dramatic gains, all industries other than government and agriculture showed dramatic drops in unemployment.

HIGHLIGHTS OF FINANCE COMMITTEE DEFICIT REDUCTION DECISION (to date)

(Savings estimates are for period 1984-87,
and include outlay savings in S. 2062)

Spending Restraint

- Medicare Part B Premium. Stabilize the premium as a percent of program costs between 1985 and 1990. (\$1.2 billion)
- Delay initial Medicare eligibility until month after an individual's 65th birthday. (\$630 million)
- Working age. Non-working spouses age 65 to 69 could elect primary medical coverage under spouse's employer health plan rather than Medicare regardless of working spouse's age. (\$1.1 billion)
- Physician freeze. Continue until July 1986 a freeze on physician's fees for those unwilling to accept assignment for all services to Medicare patients. (\$2.8 billion)
- Fee schedule for lab services. Payments for clinical lab services would be held at 62 percent of prevailing charge levels through October 1987 (\$1.0 billion)
- Limit on hospital costs. For FY 1985 and FY 1986 increases in hospital cost payments under Medicare would be limited to one-half percent less than the hospital wage and price index increase. (\$1.1 billion)
- Grace Commission. Improved cash management techniques (e.g. faster deposits of receipts to the government), improving income verification procedures for benefit programs, and using IRS refund offsets to collect debts owed the government would be implemented. (\$3.1 billion)
- Debt service. \$9.6 billion.

Revenue Increases

- Tax reform. New rules would be applied to limit tax shelters in such areas as partnership allocation of expenses and income interest deductions on discount obligations, transactions between related parties, current deductions for future liabilities, and corporate deductions for extraordinary dividends received. (\$10.2 billion)
- Tax benefits. Where a taxpayer receives a refund or other recovery for State taxes or other situations that previously gave rise to a deduction, the tax benefit portion of the deduction would be brought back into income first. (\$800 million)

-2-

- Real Estate. Depreciation rules (20 years for all structures, new or used), and recapture rules for real property would be adjusted. (\$4.4 billion)
- Freeze. Expensing for small business investment would be frozen at \$5,000, the cost of used property eligible for the ITC would be frozen at \$125,000, and the foreign earned income exclusion would be frozen at \$80,000. (\$1.9 billion)
- Distilled Spirits. Federal excise tax would be increased \$2.00 per proof gallon (\$1.0 billion)
- Income Averaging. The base period for determining the income averaging threshold would be reduced to 3 years and the formula slightly modified. (\$1.6 billion)
- Earnings and Profits. The definition of earnings and profits would be modified so that it more closely reflects a corporation's economic income rather than its taxable income. This change will reduce a corporation's ability to pay tax-free dividends. (\$1.7 billion)
- Add-Ons. In addition to miscellaneous items, the Committee agreed to phase in spousal IRAs; an R&D package; foundation tax changes; extend the targeted jobs credit for 3 years; enterprise zones; increase the earned income credit; Foreign Sales Corporations; energy credit extension with credit reordering; and others.

March 23, 1984

PRELIMINARY ESTIMATES OF THE SENATE FINANCE COMMITTEE PACKAGE

<u>SPENDING</u>	<u>1984-87 Total</u> <u>(Savings in \$ billions)</u>		<u>1984-87 Total</u> <u>(In \$ billions)</u>
<u>Reconciliation (S. 2062)</u>		<u>Reconciliation Tax Provisions (S. 2062)</u>	21.4
Finance Committee provisions	3.8	<u>Additional Revenue Items:</u>	
<u>Additional Spending Reductions</u>		Tax shelter, accounting abuse, and corporate reform	10.2
*Part B Premium	0.4	Tax Federal Home Loan Mortg. Corp.	0.3
*Delay in Initial Eligibility for Medicare	0.6	Tax benefit rule	0.8
Working Aged	1.1	Alcohol and tobacco collections	0.5
*Physician Freeze	0.8	Freeze ACRS expensing, ITC for used prop. and foreign income exclusion	1.9
Hospital Market Basket	1.1	Postpone finance lease rules	2.7
Lab Fee	0.9	Extend telephone-excise tax	3.2
Medicaid Reduction	1.4	Modification of Sec. 1231	0.2
Alcohol Rebate	0.9	Factoring of trade receivables	1.4
Revaluation of Assets	0.3	Source of shipping income	0.2
Lesser of costs of charges	0.3	Recharacterization of U.S. income as foreign source income	0.3
Competitive Bidding/Claims	0.1	Trust distributions	0.7
Round Part B Payments	0.2	Income averaging modification	1.6
SNF Rates	(0.1)	Delay in ESOP	0.4
Grace Commission	3.1	Corporate preference exclusion increase	0.5
Debt Service	9.6	Increase distilled spirits tax	1.0
Total	24.5	Deferred rent on real and taxable property	1.7
		Repeal dividend reinvestment	0.4
		Installment sale recapture rule	0.2
		20-year life for structures	4.2
		Other miscellaneous revenue increase proposals	2.6
		<u>Major Revenue Loss Provisions:</u>	
		Spousal IRAs	-.9
		Enterprise zones	-1.3
		R&D credit extension and expansion	-2.0
		R&D foreign source allocation	-0.2
		Targeted jobs tax credit	-1.6
		Life insurance tax change	-1.3
		Earned income tax credit	-0.4
		Mortgage revenue bond extension- IDB package	-0.6
		Grand Total	\$48.1

COMMITTEE ON FINANCE
WASHINGTON, D.C. 20510

RODERICK A. DEARMENT, CHIEF COUNSEL AND STAFF DIRECTOR
MICHAEL STERN, MINORITY STAFF DIRECTOR

March 30, 1984

TO: Senator Dole

FROM: George Pieler

SUBJECT: Talk to Seagrams group, Sunday, April 1

The Seagrams people are principally interested in the deficit reduction effort and the prospects for action this year.

You may also get some questions about the proposed distilled spirits tax increase.

House provision. The Ways and Means bill, H.R. 4170, would increase the Federal excise tax on distilled spirits from \$10.50 per proof gallon to \$14.25 per proof gallon--a 36% increase. This change was agreed to in conjunction with a decision to let the cigarette tax drop to 12¢ a pack in October, 1986, rather than to 8¢ as scheduled under present law. The House provision on distilled spirits raises \$1.9 billion over three years.

Senate provision. The Finance Committee bill increases the distilled spirits tax to \$12.50 per proof gallon, a 20%, \$2/proof gallon increase, and about half the increase in the House bill. Our provision raises \$1.0 billion over three years.

Industry arguments. In opposing any increase in the distilled spirits tax the industry makes four basic arguments:

- Liquor is already more heavily taxed than beer or wine, and increasing the distilled spirits tax without any attempt to equalize taxes on various alcoholic beverage puts the distilled spirits industry at a competitive disadvantage.
- The distilled spirits industry has been in decline in recent years (declining sales) and people who drink have been shifting to beer and wine.
- Even though the Federal distilled spirits tax has not been increased since 1951, States have filled in the gap by increasing their own liquor taxes--which is why the States have opposed a Federal tax increase.
- The liquor tax is regressive and increasing it hurts middle and lower-income families more than upper incomes.

-2-

Talking points

- The Finance Committee bill makes only a modest increase in the distilled spirits tax, \$2 per proof gallon. Taking into account the effects of inflation on this tax (which is levied at a fixed dollar amount), this increase will still leave the tax well below where it was in 1951 in terms of the effective rate of tax on a bottle of distilled spirits. In fact, even the House provision does not make up all of the loss to inflation over that period, which is more than a 70% reduction.
- For those concerned about the health effects of alcohol consumption, liquor has been the main focus of attention, more than beer or wine: and beer and wine tend less to be perceived as 'luxuries' than does liquor.
- Purchasing alcohol is a matter of choice, and not necessarily regressive since everyone can choose to buy or not to buy, or to buy less.

Electronic funds transfer

The Finance Committee bill, following a recommendation of the Grace Commission, also requires that payments of both alcohol and tobacco taxes be made by electronic funds transfer, and that the payments for each would be due 14 days after the end of the semimonthly payment period (rather than the 30 days distilled spirits now gets). This provision raises \$500 million over three years, and is not included in the House bill.

The industry objects to this change, which Congress has previously barred IRS from implementing through appropriations riders. They claim it would require payment before the manufacturer receives payment for the taxed goods, requiring borrowing to cover the gap, and just results in a one-time revenue gain to the government from shifting receipts to an earlier fiscal year (that is accurate).

Coverover to Puerto Rico

The Finance bill limits the cover-over to Puerto Rico of receipts from distilled spirits taxes on goods redistilled in Puerto Rico but not primarily produced there. Seagrams was not involved in the redistillation arrangement but presumably will support shutting down since it could put them at a competitive disadvantage in some cases. House bill has a comparable provision.

Our bill requires that products be at least 92% rum to get the cover-over, for both Puerto Rico and the Virgin Islands. However, the cover-over would be available for up to \$130 in total amount for the period 2-28-84 through 7-1-84. During this period cover-over will be denied anyway if an incentive payment is provided by the Virgin Islands or Puerto Rico.
